Graphing Linear Equations (Homework)

Graph the following equations using method I, finding two random points on the line.

1. $y = 4x$
2. $x = y - 6$
3. $2x = 7 + y$
4. $5x - 3y = 18$
5. $-3 = 2x + 5y$

Graph the following equations using method II, finding the x and y intercepts.

6. $x + y = 1$
7. $-3x + y = 2$
8. $y = \frac{1}{2}x - 5$
9. $-5x + 2y = 2$
10. $x = \frac{y}{-2} + 1$

Graph the following equations using method III, slope-intercept form.

11. $y = 2x + 2$
12. $y = -x - 3$
13. $\frac{2}{3}x - 2 = y$
14. $y = \frac{x}{2}$
15. $y = -\frac{3}{5}x - \frac{1}{2}$

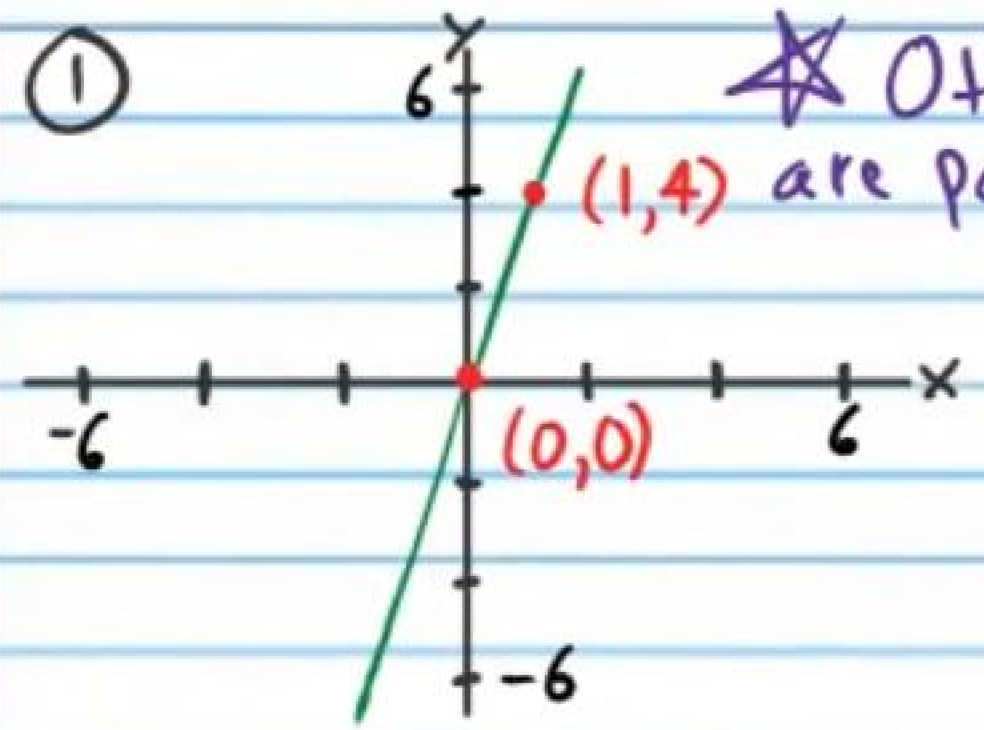
Graph the following equations using method IV, point-slope form.

16. $y + 2 = -3(x - 1)$
17. $\frac{2}{5}(x - 6) = y - 4$
18. $y - 2 = -\frac{6}{7}(x + 7)$
19. $-(x + 5) = y + 3$
20. $4(x - 0) = y + 1$

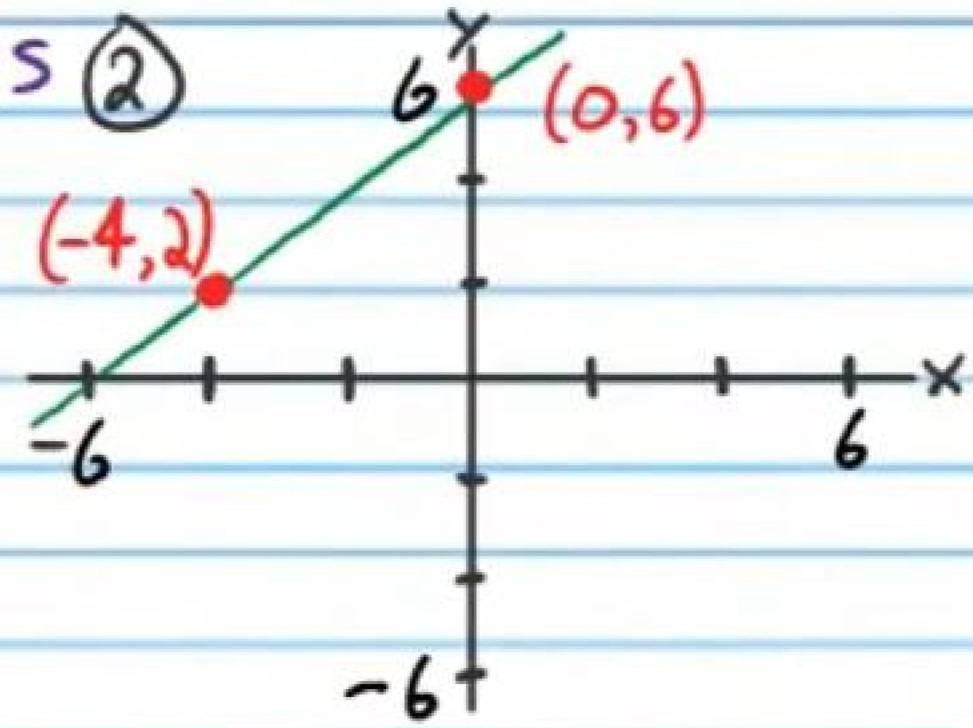
Graphing Linear Equations (Homework) Answers

☆ Other points are possible.

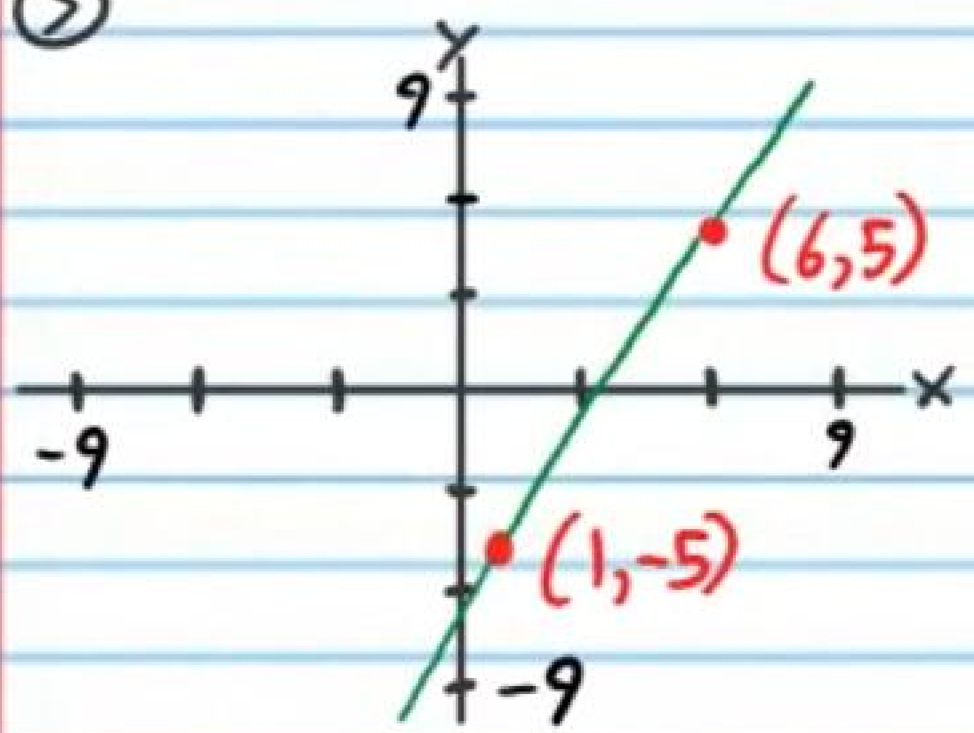
1



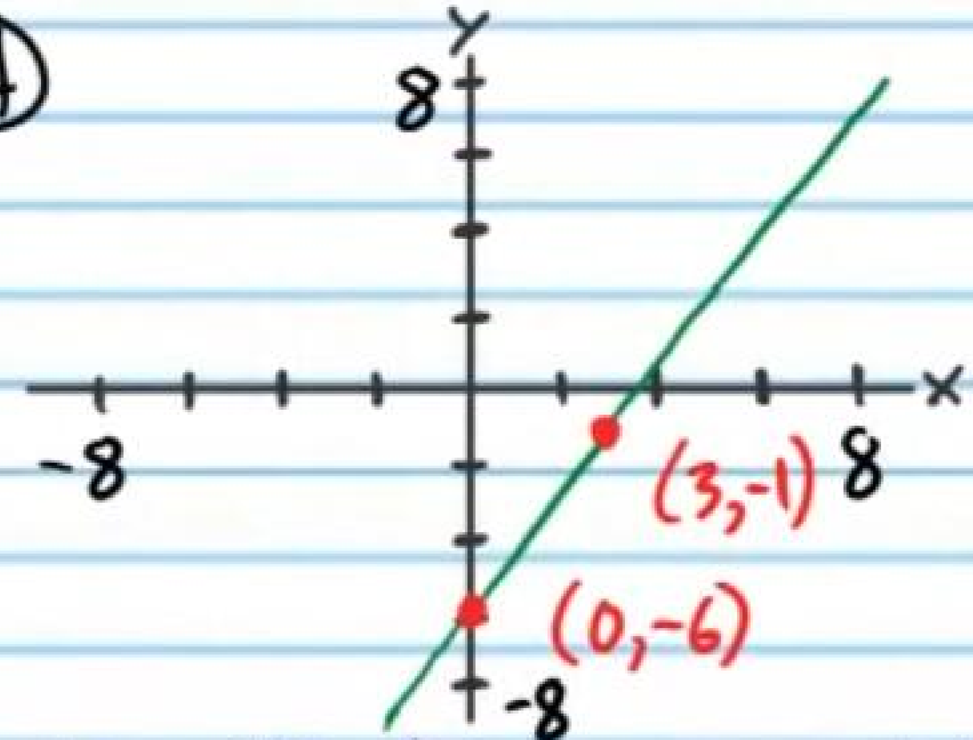
2



3

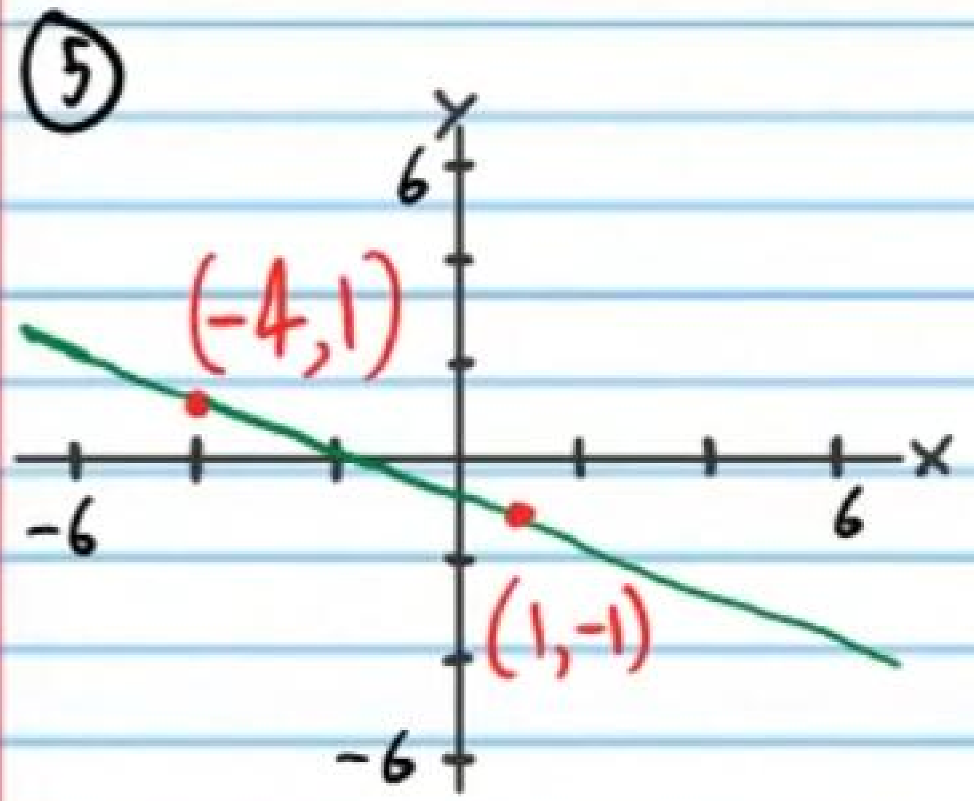


4

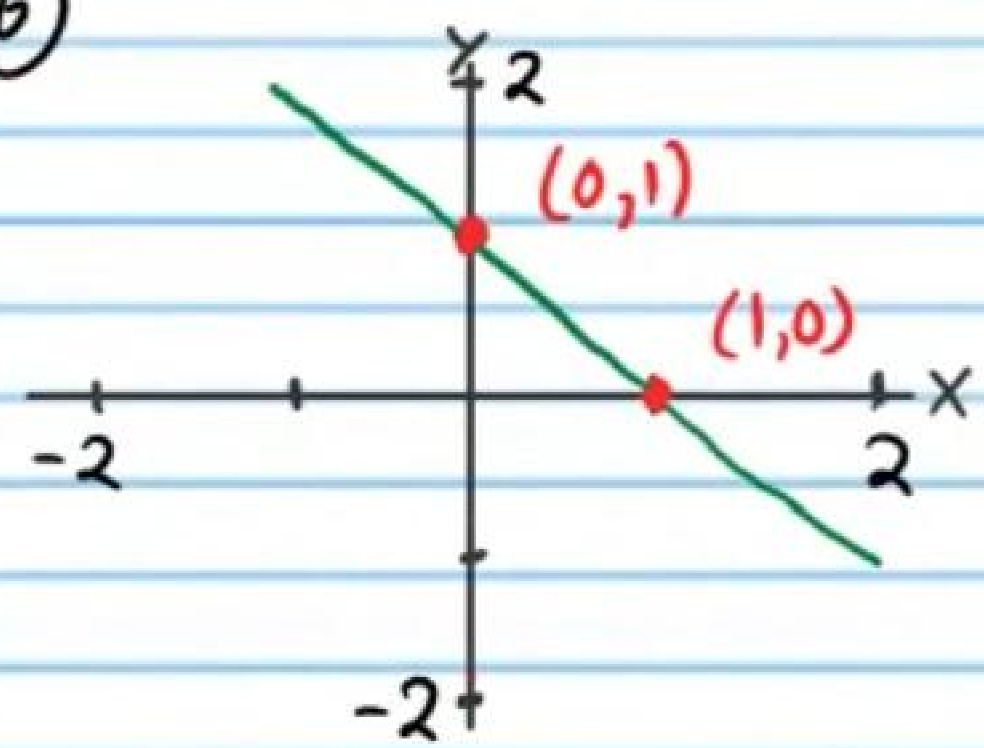


For problem #'s 6-10, one point must be on the x-axis and the other point must be on the y-axis.

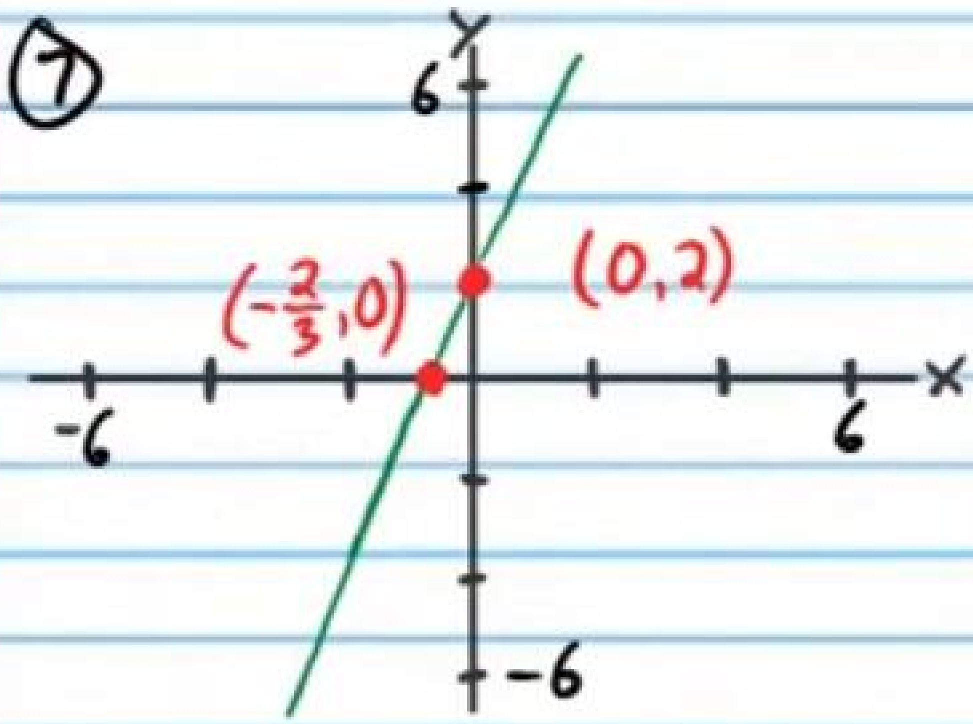
5



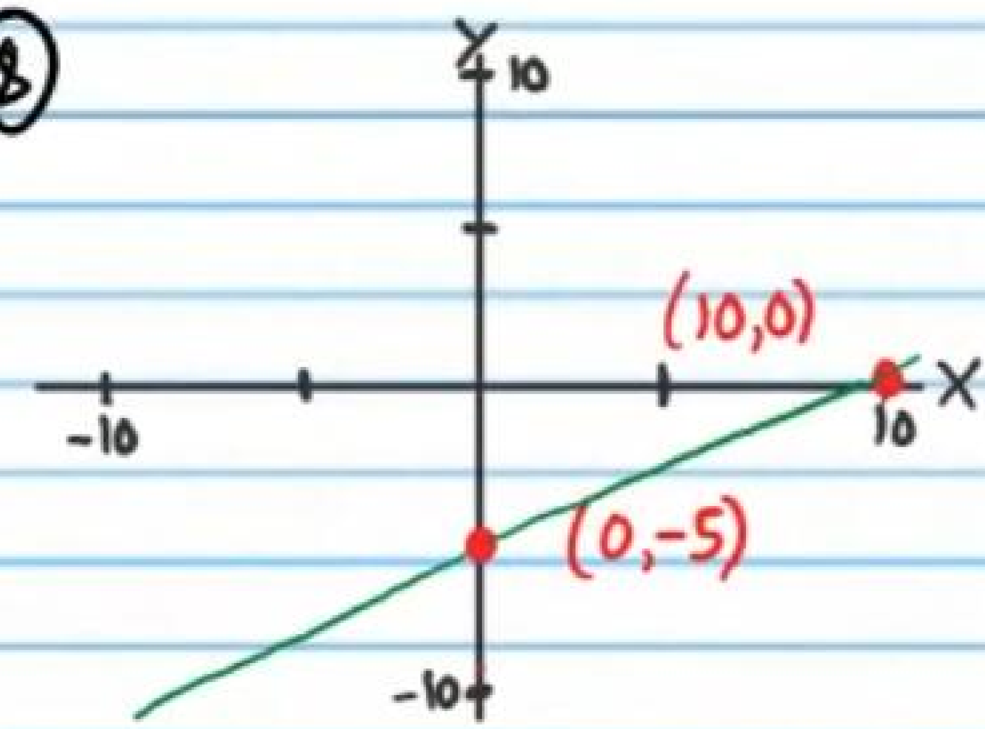
6



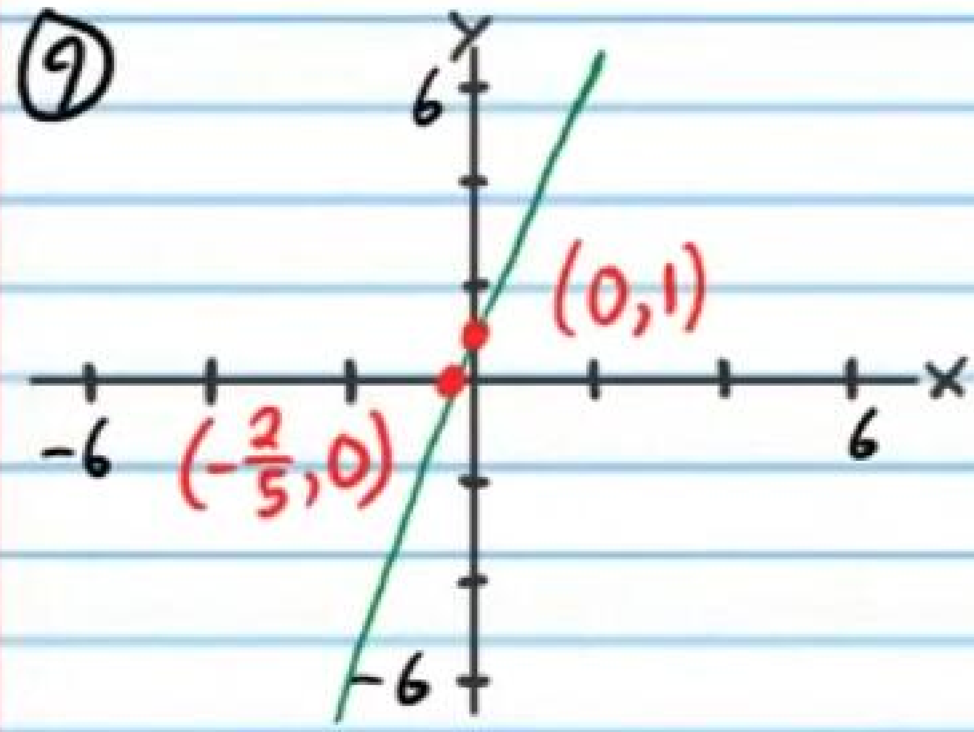
7



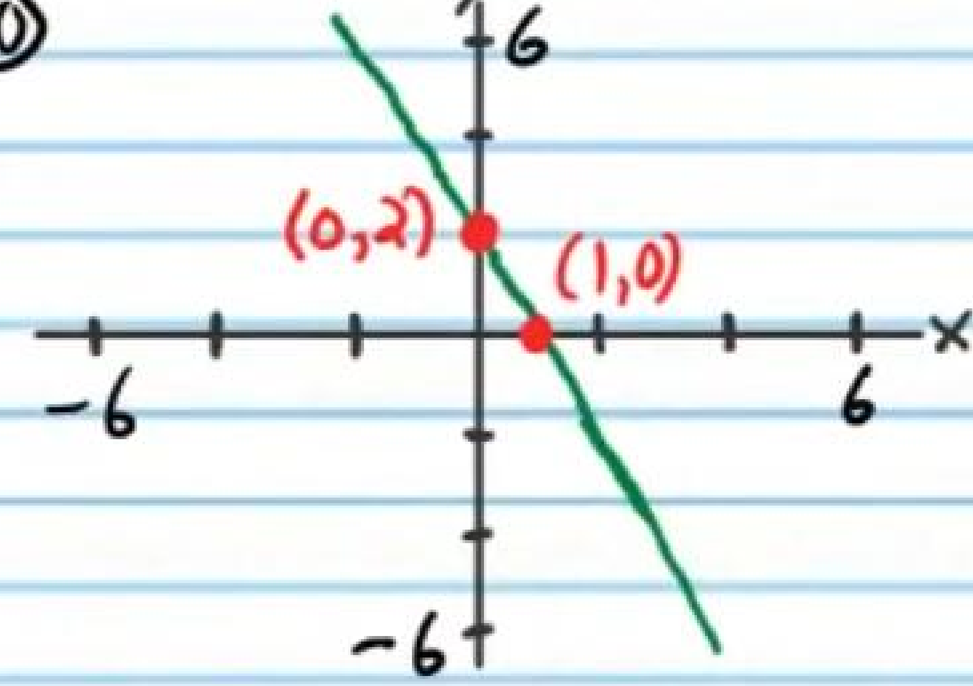
8



9

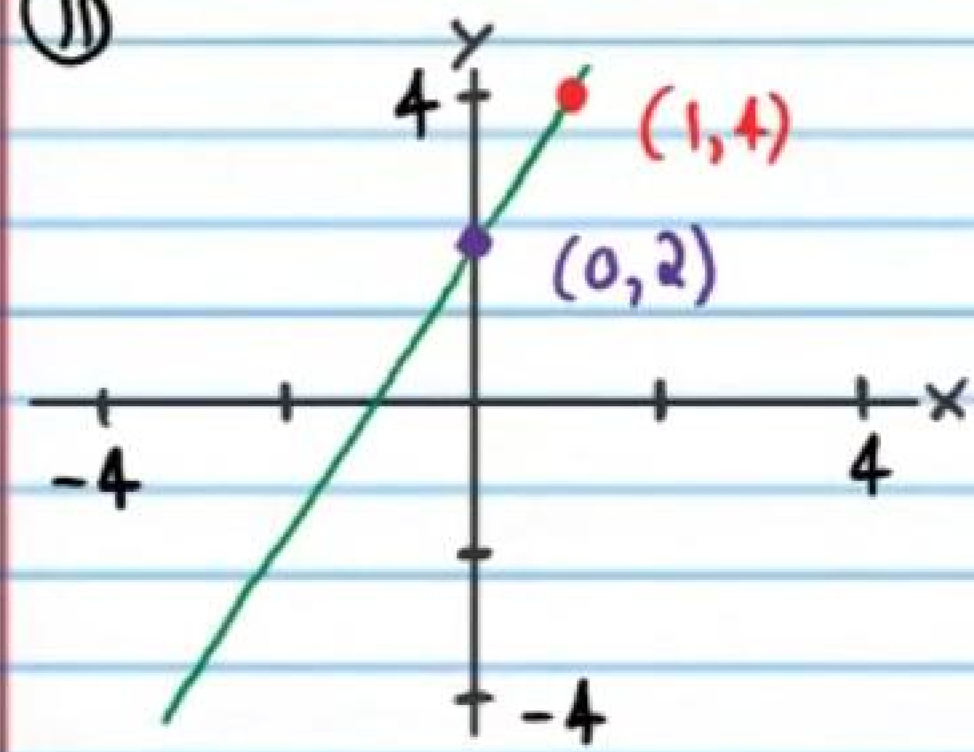


10

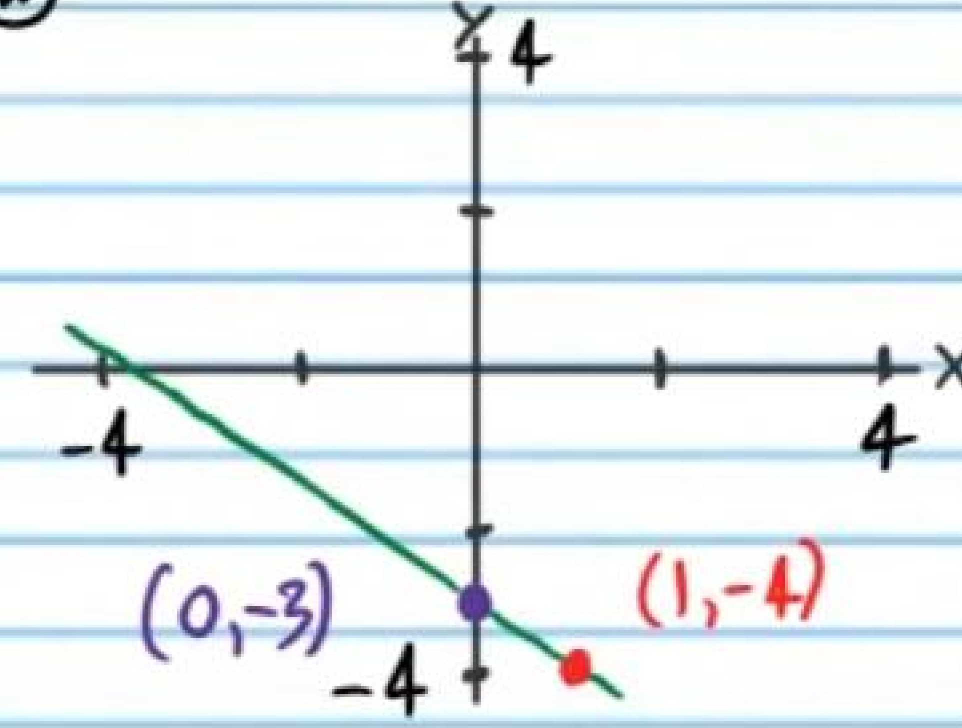


For problem #'s 11-15, one of your points must be on the y-axis's (the purple one).

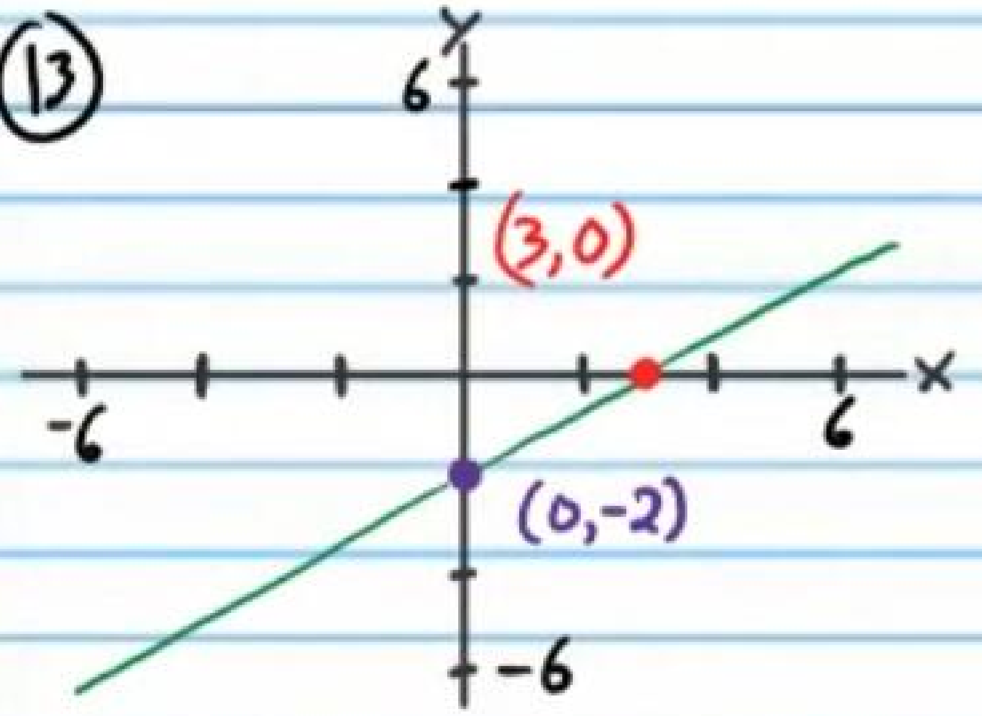
11



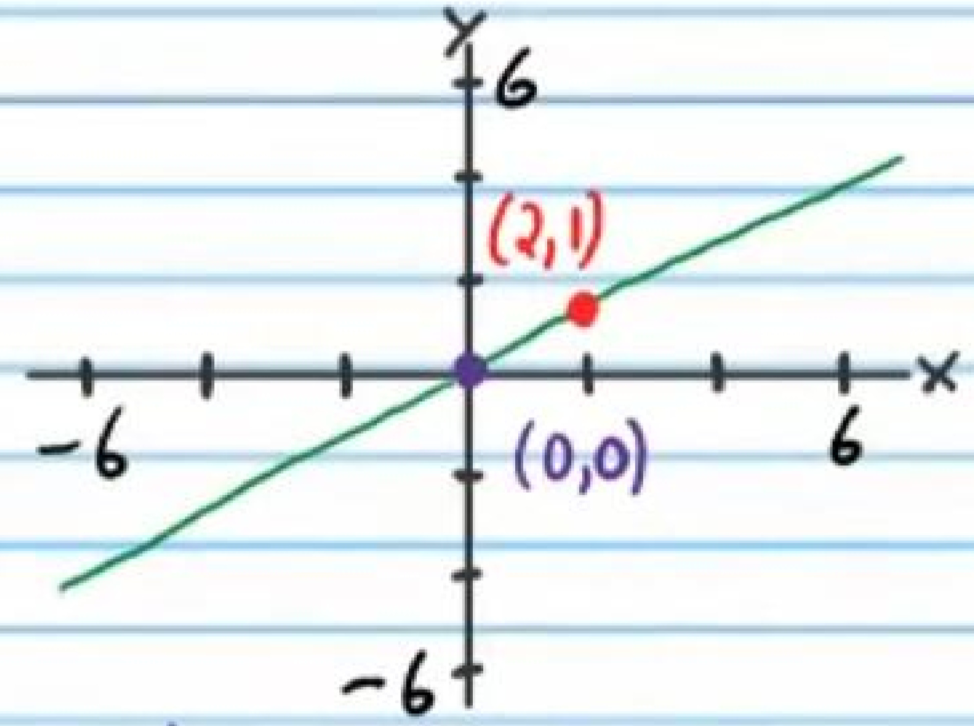
12



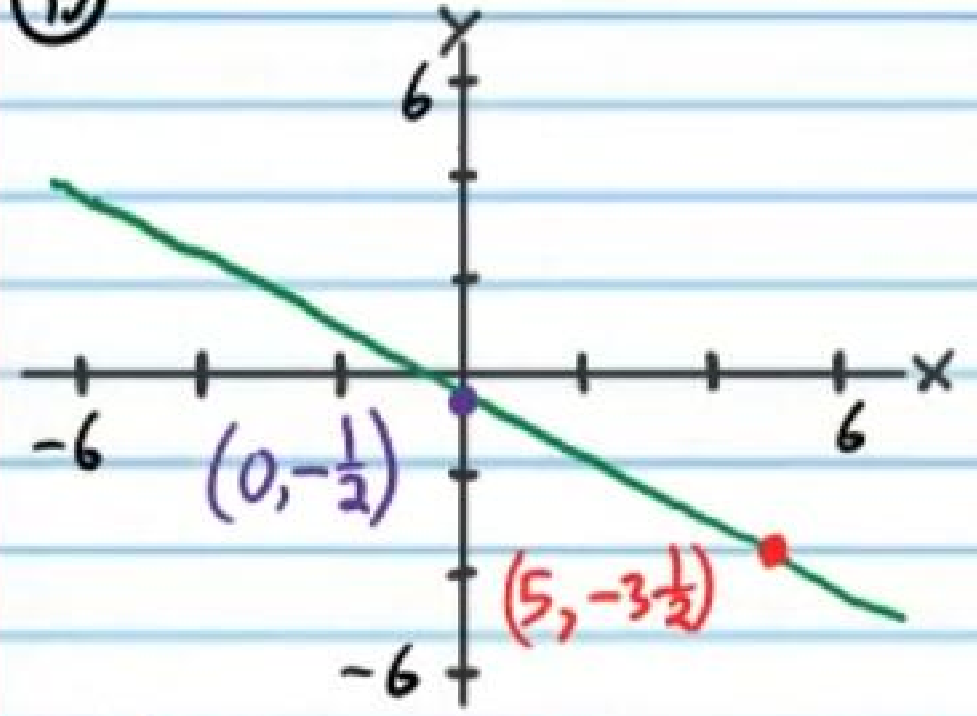
13



14

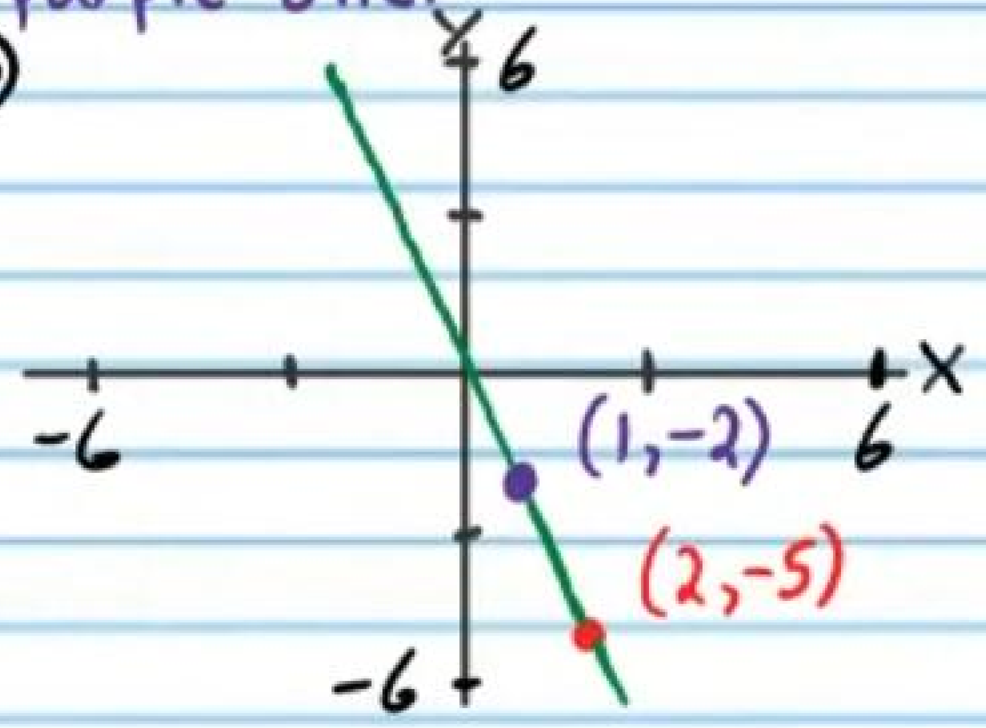


15



For problem #'S 16-20, one of your points must be the purple one.

16



* Moved down and to the left to stay in the window, rather than up and to the right.
