(51) Linsey's husband gave her a box of chocolates. The box contains 24 chocolates. Linsey wants to share the chocolates equally with her eight co-workers. How many chocolates will each of her co-workers get? Write a division expression to notate this problem (i.e. $a \div b = c$).

52) Nick has 56 baseball cards. He wants to put the cards in a book. Each page of the book can fit six cards. How many pages will he fill completely? How many cards will be on the last page? Write an expression to notate this problem ($a \div b = c, R_d$).

53) Four laps on a race track is 520 miles. What is the distance around the race track?

Challenge Problem

54 In Bible times, the first born child would get twice as much inheritance as his siblings. If a father distributes 7,245 silver coins to his six children, how many coins would the first born get? How many coins would each of the other children get?
