Solving Quadratic Equations by Completing the Square (Part II) Homework

Solve by completing the square.

★ If your answer is not the same as those to the right, try combining into one fraction or separating into two terms.

Answers

$$\textcircled{1} x^2 + 5x - 36 = 0$$

$$\boxed{-9, 4}$$

$$\textcircled{2} 0 = x^2 - 7x + 6$$

$$\boxed{6, 1}$$

$$\textcircled{3} 0 = x^2 - 3x - 4$$

$$\boxed{4, -1}$$

$$\textcircled{4} x^2 - 6x + 3 = 0$$

$$\boxed{3 \pm \sqrt{6}}$$

$$\textcircled{5} 0 = x^2 + 8x + 6$$

$$\boxed{-4 \pm \sqrt{10}}$$

$$\textcircled{6} x^2 + 10x - 4 = 0$$

$$\boxed{-5 \pm \sqrt{29}}$$

$$\textcircled{7} 0 = x^2 + 9x + 6$$

$$\boxed{\frac{-9 \pm \sqrt{57}}{2}}$$

$$\textcircled{8} x^2 - 3x - 3 = 0$$

$$\boxed{\frac{3 \pm \sqrt{21}}{2}}$$

$$\textcircled{9} 0 = x^2 - 5x + 2$$

$$\boxed{\frac{5 \pm \sqrt{17}}{2}}$$

$$\textcircled{10} 2x^2 + 24x + 1 = 0$$

$$\boxed{-6 \pm \frac{\sqrt{142}}{2}}$$

$$\textcircled{11} 0 = -5x^2 + 10x + 3$$

$$\boxed{1 \pm \frac{2\sqrt{10}}{5}}$$

$$\textcircled{12} 4x^2 - 16x + 5 = 0$$

$$\boxed{2 \pm \frac{\sqrt{11}}{2}}$$

$$\textcircled{13} 0 = 3x^2 - 9x - 2$$

$$\boxed{\frac{3}{2} \pm \frac{\sqrt{105}}{6}}$$

$$\textcircled{14} -6x^2 + 30x - 11 = 0$$

$$\boxed{\frac{5}{2} \pm \frac{\sqrt{159}}{6}}$$
