

Graphing Quadratic Expressions (Part II) Homework

Graph the following quadratic expressions. Label axes and all points used. *Show the work that helped you to graph each expression (like we did in class).* If you do not show work, this will prove that you didn't actually do the problems, but simply copied the answers.

① $y = x^2$

② $-\frac{2}{3}x^2 = y$

③ $y = \frac{1}{2}(x+1)(x+5)$

④ $-\frac{3}{4}(x-3)(x-7) = y$

⑤ $y = 2x^2 + 4x$

⑥ $x^2 - 5x = y$

⑦ $y = 3x(x-2)$

⑧ $x(x+4) = y$

⑨ $y = 3x^2 + 4$

⑩ $-x^2 + 1 = y$

⑪ $2(x-5)^2 = y$

⑫ $y = -3(x+2)^2$

⑬ $y = \frac{5}{2}(x+3)^2 - 1$

⑭ $-\frac{2}{3}(x-2)^2 + 4 = y$

⑮ $3x^2 + x - 2 = y$

⑯ $y = \frac{3}{4}x^2 + 3x + 3$

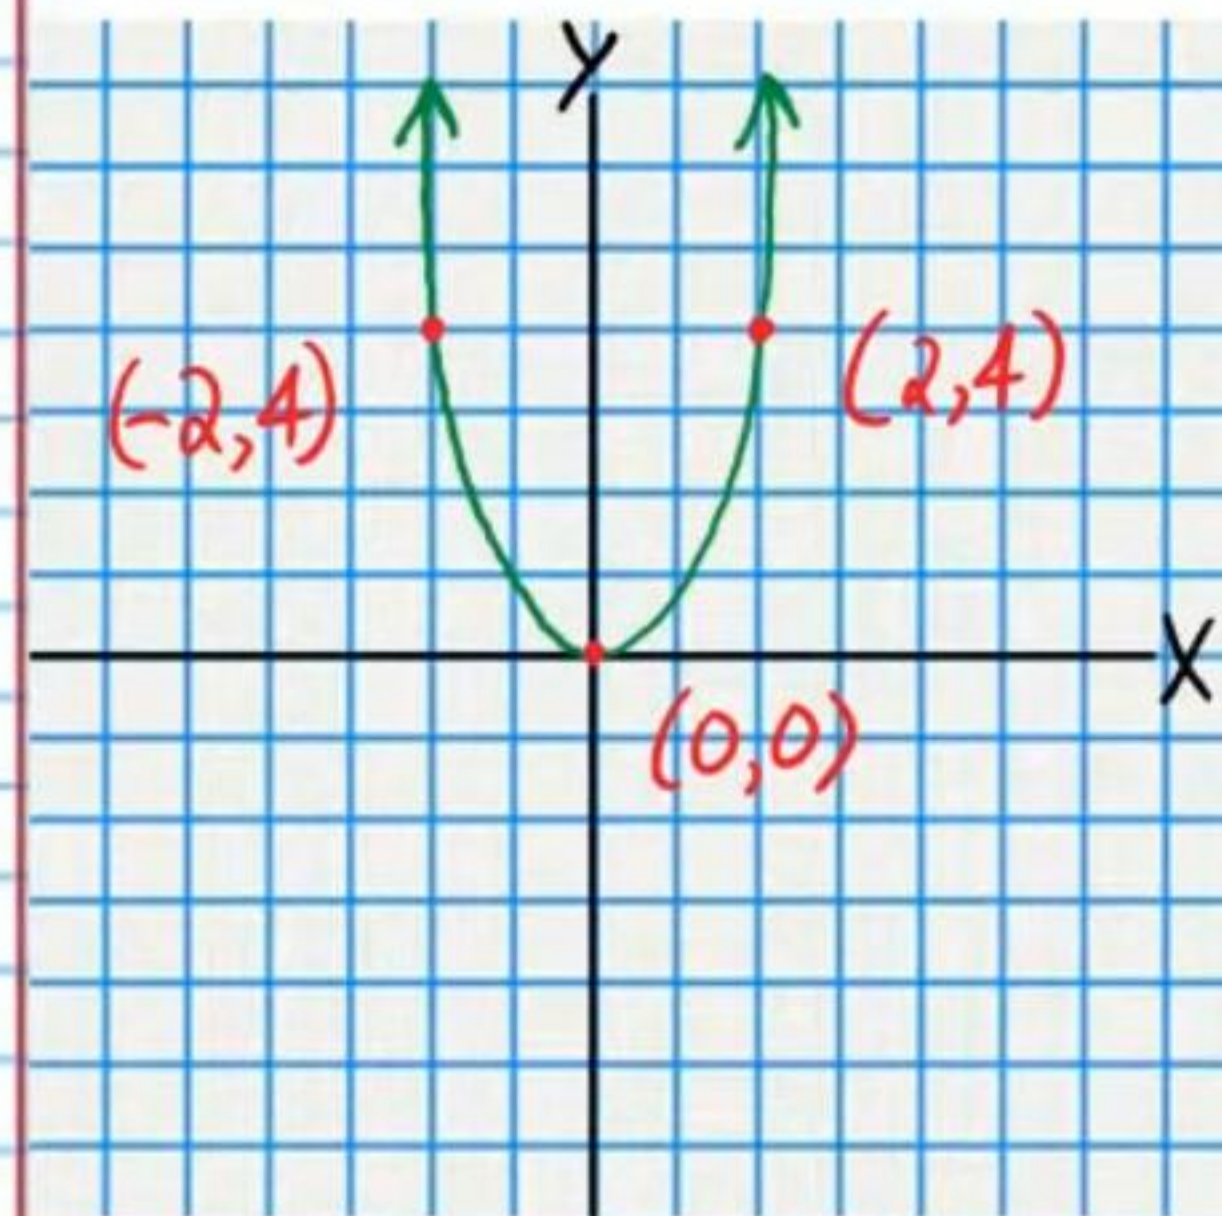

⑰ $y = 0.5x^2 + 4x - 1$

⑱ $-(x+4)(x+\frac{3}{2}) = y$

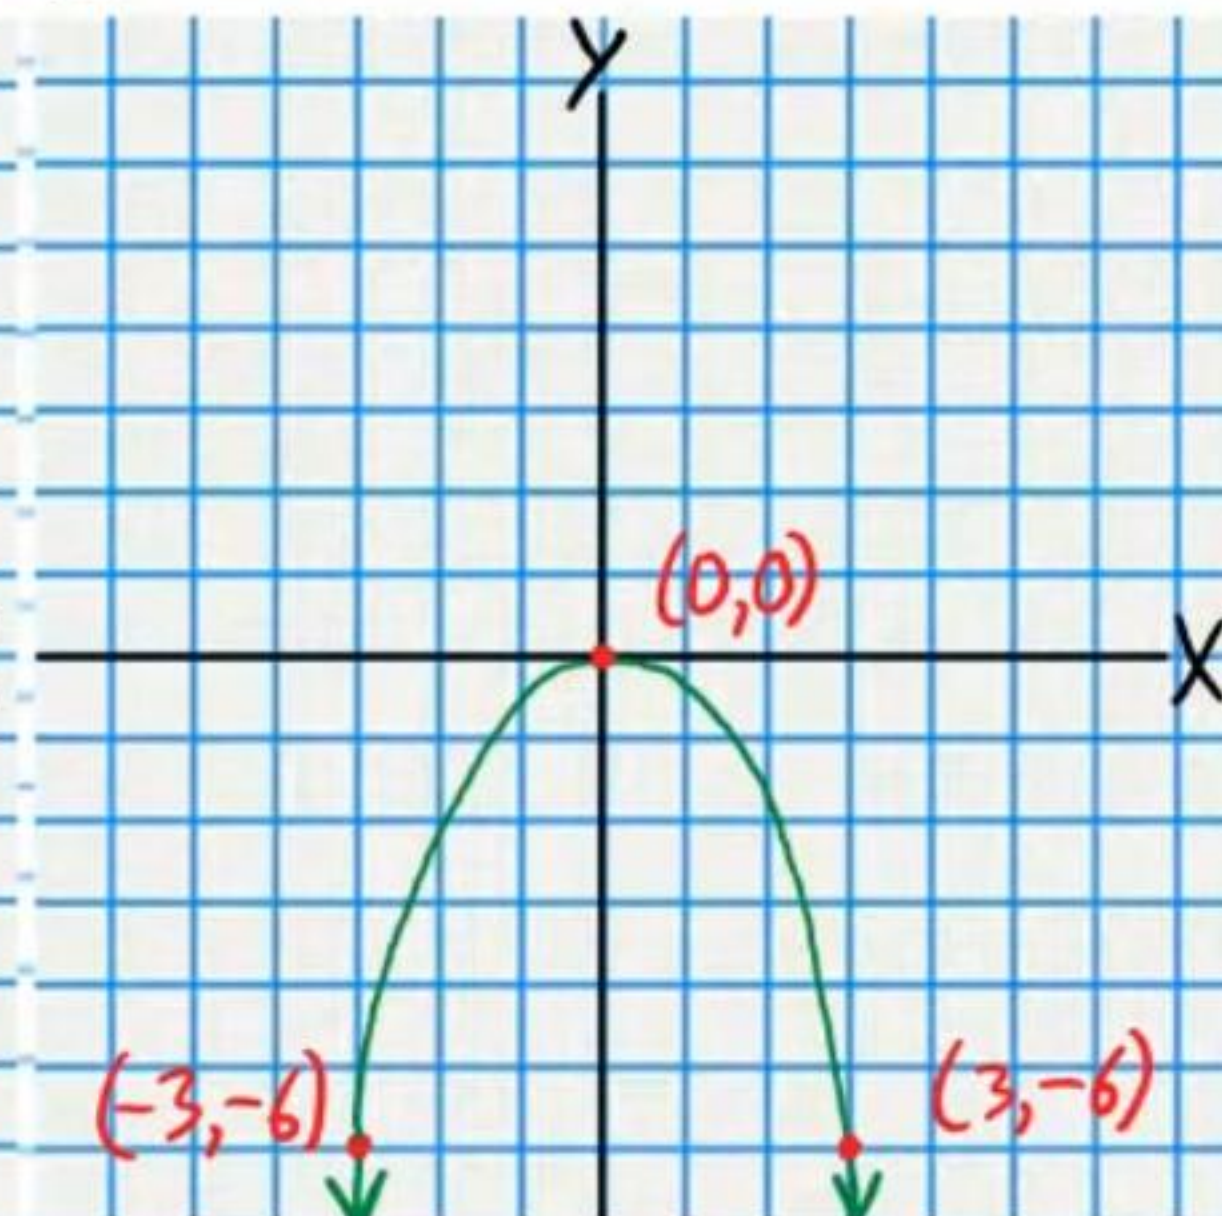

⑲ $y = (x+0.6)^2 + \frac{1}{2}$
