

Graphing Quadratic Expressions (Part VIII) Homework

Graph the following quadratic expressions. Plot the vertex, y-intercept, x-intercepts (if any), and focus. Draw the line of symmetry and the directrix and write their equations. *Show all work or anyone who checks your papers will assume that you copied the answers.*

$$\textcircled{1} y = \frac{1}{8}(x+2)(x-8)$$

$$\textcircled{2} -2x^2 + x - 4 = y$$

$$\textcircled{3} y = \frac{1}{2}(x+3)^2 - 1$$

$$\textcircled{4} -(x-1)(x-5) = y$$

$$\textcircled{5} y = x^2 - 3x - 4$$

$$\textcircled{6} -3(x-1)^2 + 1 = y$$

$$\textcircled{7} y = 2(x+2)(x-2)$$

$$\textcircled{8} -x^2 - 3x + 7 = y$$
